

PREFERRED BLUEGRASS

Kentucky Bluegrass Blend

Preferred Bluegrass is a premium blend of elite type Kentucky bluegrass that set the standard for what a turf grass should look and feel like. When given its ideal growing conditions and proper care, this grass produces a lush dark green lawn that lives up to its reputation. Although it can't achieve this on its own and requires a higher level of maintenance than other turf grasses. Once established it is very durable and bounces back well from drought or heavy traffic.

Seller makes no warranty, either expressed or implied except that the product conforms to the description on the label. Buyer agrees that seller's liability under this warranty is limited to the amount of the purchase price and seller has no responsibility for special, consequential or contingent damages.

The functionality of the mix will remain unchanged, however the mix composition and percentages of individual species may vary depending upon seed availability.

New Lawn/Repairing Bare Spots

Prepare the seedbed by tilling the soil approximately 5 to 6 inches deep. Level with a rake and compact the surface with a roller or gentle soaking. Leave the top 1/2 inch loose to allow the seed to be worked into the soil. Sow the seeds evenly at the recommended rate and lightly rake them in. A starter fertilizer can be applied prior to or right after seeding. This will aid in proper root development. After establishment, a systematic fertilizer program is recommended to maintain a healthy lawn. Covering the area with erosion control blanket or pelletized mulch will help hold the soil moisture and expedite germination. CAUTION straw bales may bring in unwanted weeds. Keep the soil moist with frequent light watering until the seedlings are visible.

Overseeding an existing lawn

Prepare the lawn in order to archive good seed to soil contact. This can be done in a number of different ways. For small areas, simple rake the area and remove any debris. Larger areas can be mowed short and power raked or aerated to expose the soil. Sow the seed at the recommended rate and lightly work the seed with a rake. Keep the soil moist with frequent, light watering until established.

COMPONENTS

- 100% Kentucky Bluegrass (Minimum 4 varieties)

FEATURES

- Excellent traffic wear tolerance
- Wide area of adaptation
- Dark green
- Fine leaf texture
- Excellent wear tolerance
- Fast Establishment
- Self-repairing rhizomes
- Dense growth
- Improved disease resistance
- Slow germination and establishment

USES

- Lawns
- Commercial Sites
- Parks
- Golf Course Roughs and Fairways
- Sports Turf
- Sod Production

SEEDING RATES

- New Turf
3-5 lbs./1,000 ft²
- Overseeding
2 lbs./1,000 ft²
